**Old town high school fax**

This business rewires its offices to put voice and data jacks in every place that might need them, reports a fish pilot supporting on stage. There are two phone jacks in each location: an 'A' voice jack and a 'B' jack that can be turned on for fax use -- although faxes are few and far between, Fish says. But a department has an all-in-one fax/copier/scanner/printer that has problems with new cables. After wave after wave of techs confirm, it is properly connected to the B jack, but received faxes are not received unless someone is there to press the Receipt button. Technicians check all-in-one settings, but they look good. They call the manufacturer, who suggests updating the firmware and software, but that doesn't solve things. They replace cables, which doesn't help, and even change a replacement device from the manufacturer -- but it doesn't make any difference. After a few months, the ticket is reopened again, and this time it lands with fish. He and a colleague start by trying to send a fax to the problem machine. That's what you expected, he doesn't answer. I send a fax from that machine to another fax, and it works correctly. They try to send a fax backwards, and no one answers. Frustrated, my colleague dials the fax number of the 'bad' device on his mobile phone, says fish. Call four times -- and then go into the voicemail. We look at each other, then check the settings on the fax again. It's set to pick up after five rings, which doesn't happen because voicemail picks up after four rings. I set the fax to pick up after two rings and everything's fine. But actually, who heard of having voicemail on a fax line? Sharky's fax didn't answer years ago, but that's not a problem -- send me an email with your true story about life at sharky@computerworld.com. You'll score a sharp shark shirt if I use it. Add the comments below, and read some great old stories in Sharkives. Get your daily dose of out-take from the IT Theater in Absurd delivered directly to your Inbox. Subscribe now to the Daily Shark Newsletter. Copyright © 2015 IDG Communications, Inc. Despite the general decline in the popularity of faxes, faxing is still a common practice in many industries. Here's a look at five of the most popular services for sending and receiving faxes from a computer without clunky hardware. Photo by mattjiggins. Even though we all have cheap emails and scanners, fax remains deeply embedded in the workflow of many industries, such as banks and government institutions. The following services can help you manage your virtual fax needs, whether you are a fax user once a year, once a month, or daily. FaxZero (web-based; Basic: Free; Premium: \$1.99 per fax) G/O Media may receive a commission provides an excellent service for rare fax users who just need to send faxes, do not receive them. You can send a free fax anywhere in the United States. In exchange for faxzero places an ad on the cover page and limits you to three pages and two transmissions per day. However, it is free, and for the last minute we only accept fax! emergency situations, can be obtained through. If an ad seems too unprofessional, you can send a premium fax with a maximum of 15 pages and no \$1.99 ads. If you are a light user, it would take a lot of \$1.99 faxes to add up to even a month of premium service to most of the other fax service providers. FaxZero doesn't come instead. eFax (Web-Based/Email, Basic: Free; Plus: \$16.95/month; Pros: \$19.95/month) eFax has two paid levels of service, plus a free service barely mentioned on their website. Their free service gives you a virtual fax number and allows you to receive up to 10 pages per month, but you can't send faxes. Since most people usually get stuck working with a company that insists on sending them faxes, pay-services are of the greatest interest. The Plus service allows you to receive up to 130 pages per month and send 30 (the over-floors are \$0.15/page and \$0.10/page, respectively). The Pro service allows you to receive 200 pages per month and no free page sent (overages and pages sent are \$0.10/page). The Pro service also includes 200 minutes of voicemail services to email. You can choose between a local number or a free number, but all pages received by the free number are billed at \$0.20 (whether or not you have free entry pages in your account). MaxEmail (Web-Based/Email; Lite: \$2/month; Basic: \$9.95/month; Premium: \$39.95/month) MaxEmail has multiple service levels. The most basic service is their ultra-light package, which runs \$2 per month (it's actually a \$24 fee for the year, but I converted it to monthly for comparison's sake), includes 100 pages of fax input per month, no free output (billed at \$0.05-0.10 per page), and a unique fax number. Upgrade to \$9.95 per month Plus account gives you the choice of what the prefix number of the fax will be in, increases the number of entry pages to 250, and adds in 100 pages of free output faxes. Upgrading to your Corporate account adds to additional features, such as increasing incoming faxes and multiple users in your account. Basic: \$10/month) MyFax is a fax service rich in features. You can select from a local or free number for the line entry fax, faxes sent and received are archived for one year and you can fax to 41 countries at no extra cost. You can fax by email or directly from Microsoft Office applications with the MyFax plug-in. MyFax also includes scheduled delivery, delivery confirmation and fax assistance of 178 documents, including popular formats, such as PDF, Office documents, and more. Accounts start at \$10 (100 pages sent/200 received) and price increase depending on the volume you need. K7.net (Web-Based/Email; Free) Unlike FaxZero, which only sends faxes (free), k7 is a free service (accepted by ads) for receiving fax and voicemail. When you sign up for an account, you are given a Seattle-area number (where the K7 is based), unless you pay \$2 per month for an 800. K7 converts all faxes and voice messages into email attachments and transmits them. If you are not a fax user, combining K7 services with FaxZero services will give you a free and decent arrangement for the occasional faxes you need to send and receive. Now that you've had a chance to look over the top five competitors for this week's hive five, it's time to vote for your favorite: Have a favorite service that didn't cut? Let's hear about it in the comments. Do you have a great idea for the next Hive Five? Send us an email to tips@lifehacker.com with Hive Five in the subject line. By Andrea Ruiz Updated September 26, 2017 With today's technology, it is no longer limited to conducting business in a traditional office setting. It's now possible to send and receive business mail almost anywhere you go. If you travel often for business purposes, you may find that you need to send faxes while you are on the road. Fortunately, with a laptop, notebook holder and portable scanner, you can fax documents anywhere in the world without ever having to leave the driver's seat. Come to a full stop in your car and shoot at a location that is safe out of the way of any traffic. If you don't have a 3G wireless connection on your laptop, park close enough to the source of the wireless connection, it would be a parking lot, so the wireless card picks up a strong signal. Install a notebook or car desk dock on the steering wheel. This turns the driver's seat into a comfortable portable office. Put your laptop on the dock. Secure your laptop on the dock. Open the laptop and turn it on. Connect the scanner to your laptop via the USB hub. Make sure you have loaded all the necessary drivers to your computer. Make sure your computer recognizes the scanner and lists it as a device that works correctly. Insert the document into the portable scanner to scan it on your computer. Check the scanned document on your computer to make sure it looks the way you want it. Save it to your hard disk in a location you can easily find. Fax the document using an Internet fax service, such as FaxZero or MyFax (see Resources). Visit the site and follow the on-screen instructions for uploading and sending the fax to the fax number you want. Some of these services allow you to send one or two faxes free of charge per day or per month, while others charge a small amount for each page sent by fax. LaptopWireless Internet ConnectionPortable USB-connectable scannerLaptop dock If that you need to fax multiple documents every week from your car, you can benefit from subscribing to an internet fax service every month. Many of these services, J2.com, will allow you to send an unlimited number of faxes from your laptop for a low monthly fee. You must have a powerful wireless internet to send faxes from the machine. Since they may not always be available, especially from a relatively remote location, it would be a parking lot, you may want to subscribe to a 3G Internet plan from your wireless service provider. By connecting a small USB device to your laptop, you can have a wireless Internet connection from your laptop almost anywhere, whether you're close to a wireless Internet provider. Provider.
